

2020

# Florida Water and Wastewater RATE SURVEY

# Forev

# word

*The 2020 Florida Water and Wastewater Rate Survey (2020 Survey)* is developed to provide insight into water and wastewater pricing practices currently utilized by publicly owned utilities in the State of Florida. This survey was first conducted in 2012 and was limited to only residential potable water rates. The *2014 Survey*, *2016 Survey*, *2018 Survey*, and this year's *2020 Survey* include both residential water and wastewater rates.

The goal of this survey is focused on typical residential potable water/wastewater bills and rate structures for over 220 Florida public utilities. The respondents include small utilities serving a population less than 5,000 to the largest utilities in Florida with service populations of more than 1 million. The survey results included in the table at the end of this document are sorted alphabetically by county and thereafter listed by the city or utility name.

The rates shown are exclusive of utility taxes or outside-city rates for those jurisdictions that have such charges. Following this introduction is a discussion on why water rates differ together with a narrative summarizing the survey results. Also included are statistics such as the gallons included in the first usage block, revenue recovery from fixed charges, minimum water bill levels, and other information. The survey table at the end of this document includes information related to water management district, residential monthly minimum water and sewer bill amounts, and bill amounts for usage at 4,000 and 8,000 gallons.

We would like to thank all of the participants in the *2020 Survey*. This survey was completed with the valuable assistance of Robin Chacko, Michelle Galvin, Nick Smith, Peggy Perry, Donna Cox, Amanda Wahula, and Jamal Simpson of Raftelis with special assistance by Annalee Harkins at the Environmental Finance Center at the University of North Carolina. Since the *2018 Survey*, Raftelis and Public Resources Management Group (PRMG) have joined teams in our Maitland office just north of Orlando. While the individuals listed above led the *2020 Survey* efforts, the entire Maitland office provided valuable review and feedback throughout the survey process.

We hope that you will find these results informative and look forward to continuing this biennial survey in the future

Sincerely,

**Tony Hairston**  
Vice President, Raftelis

# Factors Affecting Rates

The *2020 Survey* is focused on publicly owned utilities. Often utility infrastructure is a community's most valuable asset. The rates established by each community for utility service are essential for operations, maintenance, and renewal of the utility infrastructure investment. At the time of this publication, the COVID-19 pandemic has been unfolding with unknown long-term consequences to public utilities and ratepayers.

While the long-term effect of global pandemics remains to be seen, there are many other factors that affect the level of utility rates. Based on our experience, the items described in this section summarize the more salient factors affecting potable water rates.

SOURCE OF SUPPLY  
AND WATER QUALITY

EFFLUENT  
DISPOSAL

INFRASTRUCTURE  
REPLACEMENT

CONNECTION  
DENSITY

REGULATORY  
STRINGENCY

DECREASING PER  
CAPITA CONSUMPTION

WATER  
RESTRICTIONS

EFFICIENCIES

BUDGET AND  
TRANSFER POLICIES

ACQUISITIONS  
AND CONTRIBUTIONS

POLITICAL  
ACTION

## SOURCE OF SUPPLY AND WATER QUALITY

The source of a large portion of potable water supply in Florida is from underground aquifer systems. Surface water and brackish groundwater are becoming more common sources as populations have increased and groundwater sources are not as plentiful. The quality of water and level of treatment necessary to meet regulatory requirements and maintain public acceptance varies greatly throughout the state due to the various sources. For example, communities located inland often require lower levels of treatment compared to those along the coast with more brackish water. Other communities may have regulatory limits on the amount of high-quality water available through their consumption use permits. Many communities are required to identify and plan for alternative water supplies, with these alternatives being much more expensive to treat than existing sources of supply. Finally, depending on the location of the source of supply, an expensive transmission system may be required to deliver potable water to the customer service area.

## EFFLUENT DISPOSAL

While the source of water is a potentially large differentiator in potable water costs, the disposal of treated effluent is one of the most significant drivers of wastewater costs. Some of the least expensive effluent disposal methods include land applications with minimal pollutant removal. Many communities have limited land available for effluent disposal and rely on nearby surface waters to discharge treated wastewater. Enforcement of regulations and recent legislation is either restricting these discharge points or even eliminating surface water discharging in many communities. Alternatives include capital-intensive discharge solutions such as deep injection wells.

## INFRASTRUCTURE REPLACEMENT

In prior decades, utility capital funding throughout Florida was primarily focused on meeting the demands of growth. Much of the cost of providing infrastructure for growth could be mitigated by a combination of impact fees, developer contributions, and careful expansion planning. With the aging of infrastructure, increases in regulatory requirements, and the slowing of growth, communities are increasingly concerned with both upgrading and replacing infrastructure. The burden of upgrading and replacing infrastructure is typically borne by existing customers through utility rate revenues. Moreover, these capital costs are higher than the original cost due to inflation and the difficulty of replacing underground piping compared to the original installation cost on undeveloped land. While these challenges are growing, there is increasing pressure to maintain rates and avoid rate adjustments. Infrastructure replacement can often be delayed from one year to the next as budget pressures grow; however, such postponements generally create the need for larger rate increases in the future.

## CONNECTION DENSITY

A common factor affecting both the capital and operating costs of utilities is the number of connections within their service area. Utilities serving compact cities with high densities enjoy certain economies due to factors such as shorter piping systems and less travel time for servicing the system and customers. This connection density factor should be considered when comparing rates especially involving a combination of county and city systems.

## REGULATORY STRINGENCY

Water utilities must provide drinking water that is safe for its customers and meet reporting and testing requirements. Regulatory requirements, such as the Environmental Protection Agency (EPA) Disinfection By-Products Rule (DBPR), affect various communities differently based on the source of its water supply, age of the distribution system, and other factors. Meeting DBPR and other regulatory requirements can require both capital and operating investments that lead to higher user rates.

## DECREASING PER CAPITA CONSUMPTION

Many utilities are facing declining per capita potable water consumption due to multiple factors. Because most utility costs are fixed, communities must increase rates to compensate for the loss in revenue from reduced usage. This is especially valid for those utilities that have been heavily reliant on inverted (conservation) rates as a cost recovery source. There are several reasons for decreasing per capita consumption including more water efficient appliances and irrigation systems installed during renovations or through utility incentive programs. Further contributing to declining consumption is increased awareness due to conservation outreach efforts. Utility customers are responding to ongoing conservation messages.

## WATER RESTRICTIONS

Over the past several years, water shortages and watering restrictions throughout Florida have been declared at various levels by the water management districts. Water restrictions include limitations on days and hours of irrigation use and announced water shortages are accompanied by pleas to reduce consumption by set percentage amounts. Since most utility costs are fixed and, by definition, remain constant regardless of certain deviations in demand, the effect of lower water sales due to water shortages tends to require higher rates to support those fixed costs.

## EFFICIENCIES

Potable water rates are also dependent on the extent a community has been able to use technology and effective management to achieve a high level of service at the lowest possible cost. Most communities are reporting the ability to accomplish more while relying on fewer resources. For example, many utilities have implemented automated meter reading (AMR) systems to reduce operating costs and increase meter reading accuracy. Implementation of supervisory control and data acquisition (SCADA) technology can increase system monitoring capabilities while lowering operating costs. Other efficiencies that can affect rates include minimizing unbilled water and exploring wholesale arrangements to sell excess capacity.

## BUDGET AND TRANSFER POLICIES

The full accounting of indirect costs within a potable water utility can vary tremendously among various communities. For city and county utilities, there are many supporting departments that may or may not be recognized in the budget process. Even when recognized, the cost of such support services may not be accurate. In one community, such costs may be understated while in others they may be overstated due to budget pressures. In addition, many communities include a payment in lieu of taxes (PILOT), payment in lieu of franchise fees (PILOFF), or simply a transfer to the general fund. The amounts and methodology of such transfers vary considerably and have a direct effect on utility rates.

## ACQUISITIONS AND CONTRIBUTIONS

A significant number of Florida utilities were initially constructed to minimum standards by the primary land developer in order to support land sales. Many of these utilities were subsequently acquired by local governments at prices that included contributions made by existing customers. The inclusion of these customer contributions in the acquisition price was determined to be appropriate by the Florida Supreme Court. These acquisitions together with costs incurred for upgrading the utility to municipal standards is another factor contributing to rate levels.

## POLITICAL ACTION

The local political climate will have an effect on utility rates. Policymakers generally desire to have rates at a minimum level, or at least avoid rate increases, while still maintaining quality service. However, if a community values redundancy in its service or extra protection for its water supply, then it may be willing to have slightly higher rates, if necessary. Often, this must be accomplished by careful planning and occasional modest rate adjustments. The rates for many communities in the survey are indexed annually to an inflation index or by an established inflation percentage. However, there is often very strong resistance to rate increases until utility assets begin failing or regulatory mandates dictate the implementation of costly upgrades. Localized political pressures will affect rates either directly or indirectly.

# Overview of the Survey

In the Survey, a benchmark of 4,000 gallons per month is used as a representation of indoor usage levels. This amount equates to an average demand of 131 gallons per day. A secondary benchmark of 8,000 gallons, or 263 gallons per day, has also been used to provide additional information for higher levels of service. Most utilities measure metered water use in terms of gallon increments. Approximately 4% of surveyed utilities report metered water use in terms of hundreds of cubic feet (ccf) rather than thousands of gallons (kgal). For these utilities, the usage rate data was calculated based on 5.35 ccf and 10.70 ccf of monthly usage, which corresponds to 4,000 gallons and 8,000 gallons per month based on 748 gallons per ccf. Keeping in mind the narrative included earlier in this survey regarding the various reasons why water and wastewater rates vary among communities, the distribution of monthly bills at 4,000 gallons from lowest to highest is shown in Figure A.

As shown in Figure A, the average combined monthly water and wastewater bill for 4,000 gallons is \$65.25 excluding utility taxes. There is a wide distribution of residential water and wastewater bills at the 4,000-gallon usage level. As noted earlier, there are numerous reasons why utility rates are different among service providers. The average combined bill for these same utilities is \$101.75 for 8,000 gallons, as illustrated in Figure B.

Figure A:  
**Combined Monthly Water and Wastewater Bill at 4,000 Gallons**

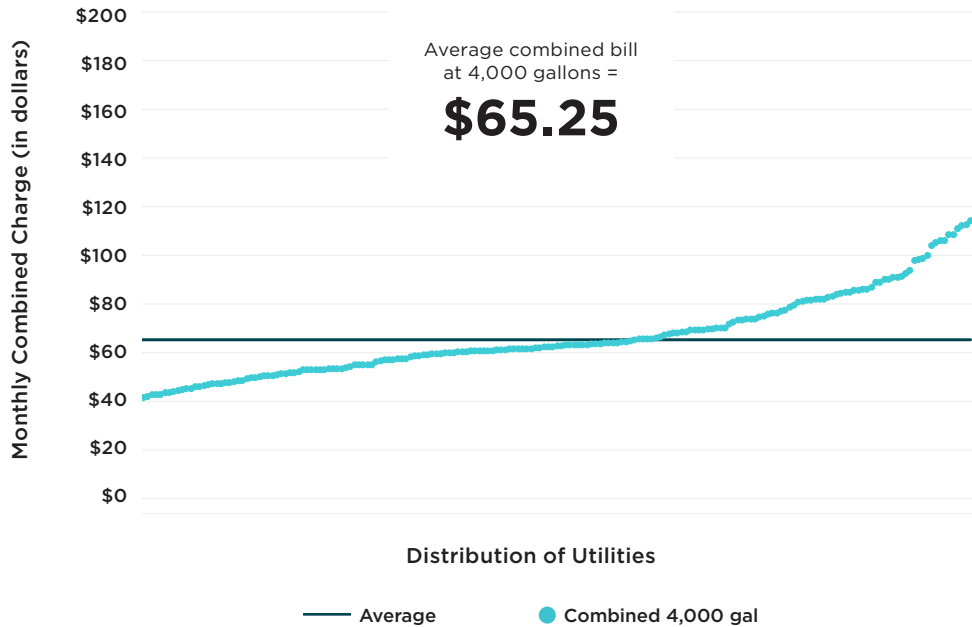

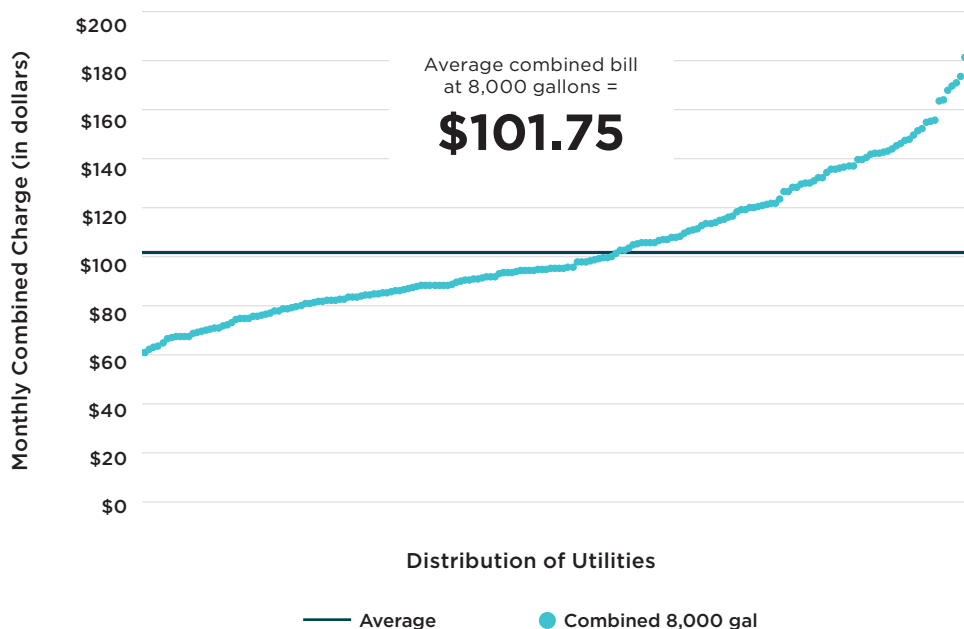

Figure B:  
**Combined Monthly Water and Wastewater Bill at 8,000 Gallons**

In the survey, we compare the average monthly water and wastewater bill for 4,000 gallons and 8,000 gallons between 2014, 2016, 2018, and 2020. The comparisons include only the 149 utilities that participated in all four surveys. As shown in Figure C, the average monthly water bill for 4,000 and 8,000 gallons increased annually from 2014 to 2020 by 2.4% and 2.5%, respectively. The average monthly wastewater bill for 4,000 gallons increased by 2.4% annually and the 8,000-gallon bill increased by 2.5% annually from 2014.

Figure C:  
**Comparison of Average Monthly Water Bill (Base Charge + Consumption) at 4,000 and 8,000 Gallons for Utilities Reported in 2014, 2016, 2018, and 2020 Surveys**

Figure D:  
**Comparison of Average Monthly Wastewater Bill (Base Charge + Consumption) at 4,000 and 8,000 Gallons for Utilities Reported in 2014, 2016, 2018, and 2020 Surveys**

# Water Bills vs. Wastewater Bills

Additional graphs and data for the water and wastewater portions of the surveyed utilities are shown below.

Monthly Wastewater Charges at 8,000 Gallons

# Surveyed Utilities by Water Management District

Consumption use permits for potable water use are governed by five main water management districts throughout Florida. The survey respondents by water management district are shown in the following tables.

## Northwest Florida Water Management District

Bay County	City of Panama City
City of Callaway	City of Panama City Beach
City of Chattahoochee	City of Parker
City of Chipley	City of Port St. Joe
City of Crestview	City of St. Marks
City of DeFuniak Springs	City of Tallahassee
City of Fort Walton Beach	Destin Water Users
City of Gulf Breeze	Emerald Coast Utilities Authority
City of Lynn Haven	Liberty County
City of Mary Esther	Okaloosa County
City of Mexico Beach	Regional Utilities - Walton County
City of Milton	South Walton Utility Company
City of Monticello	

## Suwannee River Water Management District

City of Alachua
City of High Springs
City of Lake City
City of Newberry

## Southwest Florida Water Management District

Charlotte County	City of Inverness	City of Wildwood
Citrus County Utilities	City of Lake Alfred	City of Williston
City of Arcadia	City of Lake Wales	City of Winter Haven
City of Auburndale	City of Lakeland	City of Zephyrhills
City of Bartow	City of Largo	DeSoto County
City of Bowling Green	City of New Port Richey	Hernando County
City of Bradenton	City of North Port	Hillsborough County
City of Brooksville	City of Oldsmar	Little Sumter Service Area
City of Clearwater	City of Palmetto	Manatee County
City of Crystal River	City of Pinellas Park	Pasco County
City of Dade City	City of Plant City	Pinellas County
City of Davenport	City of Punta Gorda	Polk County
City of Dunedin	City of Safety Harbor	Sarasota County
City of Dunnellon	City of Sarasota	Town of Belleair
City of Eagle Lake	City of St. Petersburg	Town of Dundee
City of Fort Meade	City of Tampa	Town of Lake Placid
City of Frostproof	City of Tarpon Springs	Town of Longboat Key
City of Gulfport	City of Treasure Island	Town of Zolfo Springs
City of Haines City	City of Venice	

South Florida Water Management District		
Bonita Springs Utilities, Inc.	City of Miramar	Key Largo Wastewater Treatment District
Broward County	City of Naples	Key West Resort Utilities Corp.
City of Boca Raton	City of North Lauderdale	Lee County
City of Boynton Beach	City of North Miami	Loxahatchee River District
City of Cape Coral	City of North Miami Beach	Martin County
City of Clewiston	City of Oakland Park	Miami-Dade County
City of Coconut Creek	City of Pembroke Pines	North Fort Myers
City of Cooper City	City of Plantation	Okeechobee Utility Authority
City of Coral Springs	City of Pompano Beach	Palm Beach County
City of Dania Beach	City of Port St. Lucie	Reedy Creek Improvement District
City of Deerfield Beach	City of Riviera Beach	Seacoast Utility Authority
City of Delray Beach	City of Sanibel	South Martin Regional Utility
City of Fort Lauderdale	City of St. Cloud	St. Lucie County Utilities
City of Fort Myers	City of Stuart	St. Lucie West Services District
City of Hallandale Beach	City of Sunrise	Toho Water Authority
City of Hialeah	City of Tamarac	Town of Davie
City of Hialeah Gardens	City of West Palm Beach	Town of Fort Myers Beach
City of Hollywood	City of Wilton Manors	Town of Hillsboro Beach
City of Homestead	Collier County	Town of Jupiter
City of Key West	Florida Keys Aqueduct Authority	Town of Lake Clarke Shores
City of Lake Worth Beach	Fort Pierce Utilities Authority	Town of Lantana
City of Marathon	Gateway Community Development District	Village of Islamorada
City of Marco Island	Greater Pine Island Water Association	Village of Palm Springs
City of Margate	Immokalee Water and Sewer District	Village of Tequesta
City of Miami Beach	Island Water Association	Village of Wellington

St. Johns River Water Management District		
Beaches Energy Services (City of Jacksonville Beach)	City of Minneola	City of Winter Springs
Brevard County	City of Mount Dora	Gainesville Regional Utilities
City of Altamonte Springs	City of Neptune Beach	Indian River County
City of Apopka	City of Ocala	JEA (City of Jacksonville)
City of Belleview	City of Ocoee	Marion County
City of Cape Canaveral	City of Orange City	Orange County Utilities
City of Casselberry	City of Orlando	Orlando Utilities Commission
City of Clermont	City of Ormond Beach	Seminole County
City of Cocoa	City of Oviedo	St. Johns County - Main System
City of Daytona Beach	City of Palm Bay	St. Johns County - Ponte Vedra System
City of DeLand	City of Palm Coast	Town of Lady Lake
City of Deltona	City of Port Orange	Town of Montverde
City of Edgewater	City of Sanford	Town of Oakland
City of Eustis	City of South Daytona	Town of Orange Park
City of Green Cove Springs	City of St. Augustine	Town of Penney Farms
City of Groveland	City of Tavares	Town of Pierson
City of Leesburg	City of Titusville	Town of Ponce Inlet
City of Longwood	City of Umatilla	Utilities Commission of New Smyrna Beach
City of Macclenny	City of Vero Beach	Village Center Service Area
City of Maitland	City of West Melbourne	Volusia County - Softened
City of Mascotte	City of Winter Garden	Volusia County - Unsoftened
City of Melbourne	City of Winter Park	

# Additional Results

A table of the detailed survey results is provided at the end of this narrative. All utilities surveyed have a combination of a fixed monthly charge and a separate variable charge based on the amount of metered water use as their primary revenue generation mechanism. Most water management district consumption use permits require utilities to have a conservation rate structure (multiple variable rate blocks that are “inverted” or increase at higher usage amounts) to reduce water consumption. There are 16 surveyed utilities (7% of respondents) that use a uniform rate structure. The inverted rate structure typically produces a costlier bill at higher usage than a uniform rate structure.

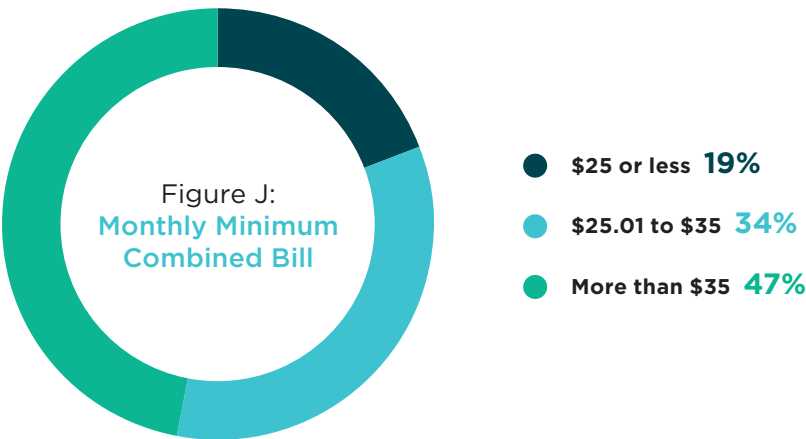

Certain other characteristics of surveyed utilities include the following:

- Monthly minimum water bill
- Monthly minimum wastewater bill
- Monthly minimum combined bill
- First water usage rate block
- Fixed portion of bills
- Wastewater residential billing cap

# Monthly Minimum Bills

The average combined monthly minimum water and wastewater bill (i.e., the lowest possible residential bill) for surveyed utilities that provide both water and wastewater services is \$35.12. The distribution of the minimum water bills is shown in Figures J, K, and L.

# First Water Usage Rate Block

Many utilities have multiple usage blocks (tiered blocks) for charging water rates to residential customers. The amount of water within the first block is usually related to indoor usage or a local affordability threshold. Figure M illustrates the distribution of utilities by the gallons included in the first usage block. The utilities that do not have tiered water rates are indicated as “uniform.”

Figure M:  
Water First Block Threshold

# Fixed Portion of Water, Wastewater, and Combined Bills

Fixed cost recovery is an important indicator of financial stability, especially considering recent trends in declining water use. Figure N provides the amount of cost recovery for water, wastewater, and combined bills at 4,000 and 8,000 gallons. It is important to note that the greater amount of costs recovered from the fixed monthly charge and initial usage block the greater the revenue stability. While fixed costs of a typical utility are 80% to 90% of total costs, the survey results show that the fixed charge comprises approximately 54% of the average combined 4,000-gallon bills and comprises 35% within the combined 8,000-gallon bills.

Figure N:  
Fixed Portion of Bills

The water and wastewater bill does not equal the combined bill since some surveyed utilities that provide only one service are not included in the combined bill average. The water, wastewater, and combined bill include data from 217 utilities, 217 utilities, and 206 utilities, respectively.

# Wastewater Residential Billing Cap

Figure O:  
Distribution of Wastewater Billing Cap

# Survey Results

The survey results are sorted alphabetically by county and then listed by the city or utility name.

County	Utility Name	Water Management District	Rates Effective Date	Unit	COMBINED		
					Minimum Charge	Bill at 4,000 Gal (5.35 Ccf)	Bill at 8,000 Gal (10.70 Ccf)

An aerial photograph showing a white speedboat with a red stripe moving across dark, choppy water, leaving a white wake. In the upper right corner, a portion of a large, modern house with a brown tiled roof and a bright blue swimming pool is visible. Several palm trees are planted along the shoreline between the house and the water. The overall scene is captured from a high angle, looking down at the boat and the property.

The 2020 *Florida Water and Wastewater Rate Survey* includes information for more than 220 utilities throughout Florida, each with its own unique characteristics, including rate structures that vary in complexity and cost. This document includes highlights from the survey and illustrates why rates may differ among communities. We hope the survey provides a resource for utilities to compare themselves with their peer communities throughout Florida and to stay abreast of industry trends.

# Who is Raftelis

Raftelis has the largest public utility financial and management consulting practice in the nation with more than 120 consultants in 18 offices around the country, including a Florida office in Maitland. Raftelis is also registered as a Municipal Advisor with the U.S. Securities and Exchange Commission and the Municipal Securities Rulemaking Board.

**Public Resources Management Group, Inc. is now a part of Raftelis.**

Raftelis acquired Public Resources Management Group, Inc. (PRMG) in 2019, and the entire PRMG staff is now part of the Raftelis family. Over the past 27 years, PRMG and Raftelis have followed similar paths—focusing on delivering lasting business solutions for public-sector agencies. The combination of our two firms provides our clients with the capabilities and resources of Raftelis, the nation's largest and most experienced practice focused on financial and management consulting for public-sector utilities, coupled with the regional insights and understanding of PRMG, Florida's leading utility financial, rate, and business solutions consultancy.

# About Raftelis

**Raftelis focuses on the areas of finance, management, technology, and communication for utilities and the public sector, including:**

## **Finance**

- Affordability
- Debt issuance support
- Financial and capital planning
- Rate, charge, and fee studies

## **Management**

- Executive recruitment
- Organizational and operational assessments
- Program development and implementation support
- Strategic planning

## **Technology**

- Billing, permitting, and customer information audits
- Business process development
- Data management, analytics, and visualization
- Performance measurement and dashboarding
- Software solutions

## **Communication**

- Graphic design and creative services
- Media and spokesperson training
- Public involvement and community outreach
- Risk and crisis communication
- Social media strategy
- Strategic communication planning

Raftelis conducts and/or publishes several of the water and wastewater utility industry's leading rate surveys, some of which are co-published by various industry associations, including:

- *Water and Wastewater Rate Survey*, co-published with the American Water Works Association (AWWA)
- *INSIGHT*, published by the Association of Metropolitan Water Agencies
- *Florida Water and Wastewater Rate Survey*
- *California-Nevada Water and Wastewater Rate Survey*, co-published with the California-Nevada AWWA
- *Water and Wastewater Residential Rate Survey*, published by the Water Infrastructure Finance Authority of Arizona
- *Washington/Oregon Water and Wastewater Rate Survey*
